ABSTRACT

Data tables summarize statistics on community college transfer students attending the nine Florida state universities during 1975 through 1977. Data indicate that the number of transfers increased each year, with males typically outnumbering females. Racial distribution remained relatively stable, though the percentages of blacks and hispanics steadly increased and the percentages of whites slightly decreased. The mean age of transfers remained stable over the three-year period; however, the percentage of transfers under 31 climbed from 86.9% in 1975 to 87.4% in 1976 and dropped to 86% in 1977. The greatest percentage of students (49% in 1975 and 44.6% in 1977) were in their first year of study. The largest group each year transferred after earning 90 quarter hours at the community colleges, utilizing the community colleges extensively to complete lower division course work. Most students transferred to the university nearest their community college and, while there, most (85.2%-90.3%) earned a grade point average (GPA) of 2.0 or higher. Additional tables present the number of hours earned toward a degree at the community college and at the university and GPA data for various subgroups--those transferring before or after earning 90 quarter hours, those from each campus, those with different majors--over the three year period. INTRODUCTION

One of the major functions of Florida's community colleges is to provide curricula through which students may prepare themselves for entry into the universities' upper division instructional programs. Consequently, the community colleges and the Division of Community Colleges are concerned about the academic progress of those students transferring to the state universities of Florida.

The Articulation Agreement of 1971 between the Division of Community Colleges and the Division of Universities provides for the encouragement of research conducted cooperatively by the two divisions. Articulation reports have been published by the Division of Community Colleges since 1973. These reports utilize data on former Florida community college students who were in the State's universities as far back as 1971. In 1974, the State University System (SUS) established the Student Data Course File which contains a rather complete record of all students enrolled in the universities. Since that time a stable data format has been maintained enabling one to compare groups of students over time. This allows this report to include data for the Fall term for three consecutive years, 1975, 1976, and 1977.

The reader will typically be interested in comparing a specific sub-group of students over time - those from a given community college, those at a given university, those in a particular major, etc. It is virtually impossible to note all possible trends of interest found in the following tables. However, the information is there for the reader to search out. Because of the volume of data presented, only brief comments will be made concerning the tables and concentration will be on the totals.

Each table will contain summary statistics on undergraduate students in the nine state universities - Florida Agricultural and Mechanical University (FAMU), Florida Atlantic University (FAU), Florida International University (FIU), The Florida State University (FSU), Florida Technological University (FTU), The University of Florida (UF), The University of North Florida (UNF), the University of South Florida (USF), and The University of West Florida (UWF) - who prior to enrolling in the SUS were students at one of Florida's 28 community colleges (see inside back cover). Most tables will include students enrolled in the Fall term in 1975, 1976, and 1977.

Table 1 presents the frequencies of undergraduate students, at the state universities of Florida, whose college of last attendance was a Florida community college. The table indicates that the total number of transfer students has increased each year from 1976 through 1977. Males outnumbered females except at FAMU in 1975 and at FSU in 1977 although the percent of females in the SUS has increased steadily.

Table 2 indicates that the racial distribution for transfers in the SUS has remained relatively stable except that the percents of Blacks and Hispanics have steadily increased and the percent of Whites has steadily decreased slightly. This pattern generally held at all universities except FAMU where the percent of Whites has increased sharply.

Table 3 shows that the mean age of transfer students has remained stable over the three-year period. The percentage of transfers age 30 and under climbed from 86.9 to 87.4 between 1975 and 1976 but dropped to 86.0 in 1977. The percentage of over 30-year olds was considerably higher at UNF than at other universities.

Table 4 indicates that the greatest percentage of students were in their first year of study in each of the three years. This percentage averaged 49.9 in 1975 and gradually dropped to 44.6 in 1977. The second largest group had been in the SUS up to two years. Percentages of transfers who have been in the SUS longer drop off substantially each year indicating that students tend to complete their program or otherwise leave after two to three years. It should be noted that prior investigation of these data shows that the majority of students enter the SUS in the Fall quarter.

Table 5 reports the number of quarter hours transferred by the students into the universities. Data were missing for FAMU 1975 and data for FAU, FIU, UNF, and UWF are questionable. Students have been reported transferring less than 90 quarter hours when in fact these universities are upper division institutions. The table shows clearly that the largest group of students each year transferred after earning 90 quarter hours (60 semester hours) at the community college. Although there are no apparent trends, the percent never dropped below 50.2 except at FAMU in 1976 and at FTU in 1977 and goes as high as 91.4 at FIU in 1977. Since the Associate of Arts degree requires at least 90 quarter hours, this would indicate that the students are probably utilizing the community colleges extensively to complete lower division work before moving on.

Table 6 shows the number of hours earned toward a degree at both the community college and the university. For the information in Table 6 to be more meaningful, one needs to know the amount of time spent in accumulating these hours toward graduation. A relatively small percentage (3.5 to 4.1) of students in the SUS have accumulated more than 180-194 quarter hours, the number typically required for a baccalaureate degree.

Percentages in Table 7 and 8 remained fairly stable over the three-year period. Upon close inspection, the reader will note that most students transferred to

the university nearest their community college. Table 7 reports column percents, orienting this table toward universities and Table 8 reports row percents, orienting this table toward community colleges. No particular trends are noted over the three-year period.

Table 9 clearly shows that most transfer students (85.2% to 90.3%) earned a grade-point average (GPA) of 2.00 or higher in the SUS. GPA in the SUS is based on a 4.0 system and is calculated by dividing grade points earned by credit hours attempted. It was assumed that many GPA's equal to zero represented erroneous or missing data so these were grouped separately.

Tables 9 through 15 present GPA data for transfer students over the three-year period 1975 to 1977. Consistently, GPA increased between 1975 and 1976 while standard deviation (S.D.) decreased; between 1976 and 1977 GPA decreased while S.D. increased. Note that in 1975 and 1976 a large number of GPA's were zero or missing because Fall grades were not included on the data tapes. One should be cautious when attempting to compare GPA over the three-year period. It would be reasonable to assume that transfer students experience a decrease in GPA when first entering the SUS, but would experience an increase in subsequent terms.

Table 10 enables the reader to compare two groups of Fall 1977 transfer students - those who transferred before earning 90 quarter (60 semester) hours at the community college and those who transferred after earning 90 quarter hours. Since the table is lengthy, 1975 and 1976 data are not shown for individual universities. However, these are available in prior editions of Articulation. Enough information is given for one to compare any two groups of interest. By and large, the GPA earned at the university was higher for those who transferred after earning 90 quarter hours, the usual requirement for the AA degree. GPA's

reported are means of individual GPA's. In all tables reporting GPA, zero or missing cases were excluded.

Table 11 presents the same type of data as Table 10. Here are shown SUS totals for 1975, 1976, and 1977. For each of the years, the groups transferring after earning 90 quarter hours earned a higher mean GPA than did the group transferring prior to earning 90 quarter hours. The information indicates that an increasing proportion of community college students are earning 90 hours or more prior to transferring. In 1975, 75.6% of the students had 90 or more hours, while in 1977, 77.3% had earned 90 or more hours.

Table 12 presents the mean GPA earned at the university for all students found in Table 10. Again, data for 1975 and 1976 were omitted because the table is lengthy.

Table 13 reports SUS total mean GPA's for transfer students from each community college for the years 1975, 1976, and 1977. Again, it is quite noticeable that the total mean GPA has steadily increased while the S.D. has decreased.

Table 14 shows the number registered in each major area by university. Each of these groups is divided into two subgroups - those whose GPA was 2.00 or higher and those whose GPA was below 2.00. Mean GPA for the major is reported in the final column. As with Table 10 and Table 12, data are presented for Fall 1977 only.

Table 15 presents data similar to Table 14, but allows one to make comparisons in the SUS for the years 1975, 1976, and 1977.
